

# Solving the Vaccine Puzzle ... ... one piece at a time

## Birth

## 2 Months

## 4 Months

## 6 Months

## 6 +

## Months

## 12 Months

Strive to complete **ALL** recommended vaccines by baby's 1<sup>st</sup> birthday.

Help protect your child against these diseases:

**Hep B:** Hepatitis B – A serious liver disease

**PCV:** Pneumococcal conjugate vaccine – Protects against serious blood, lung and brain infection

**Hib:** Haemophilus influenza type b – a serious brain, throat and blood infection

**DTaP:** Diphtheria, tetanus and pertussis (whooping cough)

**IPV:** Injectable Polio Vaccine

**MMR:** Measles, mumps and rubella

**Flu:** Influenza - A serious lung infection

**Hep A:** Hepatitis A – A serious liver disease

**Rota:** Rotavirus – A serious vomiting/diarrhea illness

**Lead Screening:** Please screen at 1 & 2 years old

The 4th dose of DTAP may be administered at 12 months of age provided that 6 months have elapsed since the 3rd dose (ACIP, AAP, AAFP).

- Your healthcare provider will know which vaccines are necessary after the one year well baby visit.
- This WNY Pediatric & Adolescent Coalition Vaccine Schedule is compatible with the current recommendation of the Advisory Committee on Immunization Practices (ACIP).
